

Jasan Hernández

Full-Stack Engineer

Information Technology Engineer, Frontend Developer, athlete and human potential enthusiast. In my spare time I help people learn programming and web development, I also like to learn new things about programming languages, design patterns and good practices. As a developer, I aspire to develop innovative technological products that make people's lives easier and generate a positive social impact.

Positive attitude Curiosity

PERSONAL PROJECTS

WhatsApp Web Bussines

April 2021 - September 2021

System built for a private company. A copy of WhatsApp was created in terms of functionality, but also interesting features were added, roles, mass messaging, creation of Bot, etc. Stack: **Typescript, Nodejs, React, Redux.**

Covid Tracking

September 2020 - December 2020

Construction of a PWA to measure, manage and display coronavirus cases in different colonies of Puebla, in addition to the creation of a self-diagnosis in the form of a questionnaire using Google **Google Maps, NextJS, Firebase, Google SignIn.**

Tickets App

January 2021 - February 2021

Construction of a web application to generate and manage a ticket and queue system. This project was developed with **NodeJS, ReactJS y Ant Design.**

FastPizza

March 2020 - April 2020

Construction of a ChatBot for messenger, using **NodeJS** to create a webhook that would respond with predefined messages to the most frequently asked questions from users.

Simulate Compiler

January 4, 2020 - January 15, 2020

This project is very interesting, although it was a project for the university: In this project a natural language programming interpreter was created, to be able to draw figures on a canvas, save variables, execute functions, etc. Built in: **Vaniila Javascripts, CSS y HTML**
